Paper 1 Multiple Choice

May/June 2026

1 hour 15 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid or tape.
- Do **not** write on any bar codes.
- You may use a calculator.

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.

This document has **16** pages.

Data

acceleration of free fall	$g = 9.81 \text{ m s}^{-2}$
speed of light in free space	$c = 3.00 \times 10^8 \text{ m s}^{-1}$
elementary charge	$e = 1.60 \times 10^{-19} \text{ C}$
unified atomic mass unit	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg}$
rest mass of proton	$m_p = 1.67 \times 10^{-27} \text{ kg}$
rest mass of electron	$m_e = 9.11 \times 10^{-31} \text{ kg}$
Avogadro constant	$N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$
molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
Boltzmann constant	$k = 1.38 \times 10^{-23} \text{ J K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$
permittivity of free space	$\epsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$ ($\frac{1}{4\pi\epsilon_0} = 8.99 \times 10^9 \text{ m F}^{-1}$)
Planck constant	$h = 6.63 \times 10^{-34} \text{ J s}$
Stefan–Boltzmann constant	$\sigma = 5.67 \times 10^{-8} \text{ W m}^{-2} \text{ K}^{-4}$

Formulae

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
hydrostatic pressure	$\Delta p = \rho g \Delta h$
upthrust	$F = \rho g V$
Doppler effect for sound waves	$f_o = \frac{f_s v}{v \pm v_s}$
electric current	$I = Anvq$
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$\frac{1}{R} = \frac{1}{R_1} + \frac{1}{R_2} + \dots$

- 1 Which row correctly identifies scalar and vector quantities?

	scalar quantities	vector quantities
A	energy and work	momentum and power
B	energy and momentum	force and power
C	energy and power	force and momentum
D	momentum and power	force and velocity

- 2 What are the base units for intensity?

A kg s^{-3} **B** kg s **C** $\text{kg m}^2 \text{s}^{-3}$ **D** $\text{kg m}^4 \text{s}^{-3}$

- 3 Three coplanar forces, P, Q and R, act at a point.

The three forces are in equilibrium.

The magnitude of P is increased by 10%. The directions of the forces are unchanged.

Which percentage increase, if any, is required to the magnitudes of Q and R for the forces to be once again in equilibrium?

	% increase in magnitude of Q	% increase in magnitude of R
A	10	10
B	0	10
C	$10\sqrt{2}$	$10\sqrt{2}$
D	10	$10\sqrt{2}$

- 4 A metal rod is exactly 62.00 cm long. The length of the rod is measured using two different devices, X and Y.

The reading on device X is 61.5 cm.

The reading on device Y is 62.65 cm.

Which device gives the more precise reading for the length, and which device gives the more accurate reading for the length?

	more precise reading	more accurate reading
A	X	X
B	X	Y
C	Y	X
D	Y	Y

- 5 One object moves directly from P to R.

R
•

Q
•

P
•

In a shorter time, a second object moves from P to Q to R.

Which statement about the two objects is correct for the journey from P to R?

- A They have the same average speed.
- B They have the same average velocity.
- C They have the same displacement.
- D They travel the same distance.

- 6 A small glider moves along a horizontal air track as shown.

At each end of the air track, the glider has a perfectly elastic collision with a fixed buffer.

The glider moves at a constant speed between collisions.

Which graph represents the variation with time t of the velocity v of the glider as it moves between the two buffers?

- 7 The diagram shows an arrangement to stop trains that are travelling too fast.

Trains coming from the left travel at a speed of 50 m s^{-1} . At marker 1, the driver must apply the brakes so that the train decelerates uniformly in order to pass marker 2 at no more than 10 m s^{-1} .

The train carries a detector that notes the times when the train passes each marker and will apply an emergency brake if the time between passing marker 1 and marker 2 is less than 20 s.

How far from marker 2 should marker 1 be placed?

- A 200 m B 400 m C 500 m D 600 m

- 8 An experiment is performed to measure the acceleration of free fall g . A body falls between two fixed points. Four measurements are taken.

Which measurement is **not** required for the calculation of g ?

- A the distance fallen by the body
B the initial velocity of the body
C the mass of the body
D the time taken for the body to fall

- 9 What is the definition of linear momentum?

- A force per unit time
B mass per unit velocity
C product of force and time
D product of mass and velocity

- 10 A hollow steel object is dropped from rest in air. The object reaches a terminal velocity v before hitting the ground.

Which change results in an increase in the terminal velocity?

- A Drop a solid steel object of the same dimensions from the same height.
B Drop the object from a greater height.
C Throw the object downwards from the same height with an initial velocity $0.5v$.
D Throw the object upwards from the same height with an initial velocity $0.5v$.

- 11 A bowling ball of mass 4.50 kg falls a short distance vertically into a tray of sand.

The bowling ball decelerates uniformly in the sand.

The deceleration of the bowling ball when it is in contact with the sand is $8.00 \times 10^2 \text{ ms}^{-2}$.

What is the magnitude of the force exerted on the bowling ball by the sand as it decelerates?

- A 44.1 N B 3560 N C 3600 N D 3640 N

- 12 Which statement is **not** a requirement of a pair of forces that obey Newton's third law of motion?

- A The forces act in opposite directions.
 B The forces act on different objects.
 C The forces act on objects in contact.
 D The forces are of equal magnitude.

- 13 A hydrometer is a device for measuring the density of liquids. It consists of a weighted bulb at the bottom of a calibrated tube.

The hydrometer is floating in a liquid at room temperature. The length of the tube above the level of the liquid is h .

Which change causes h to decrease?

- A adding more liquid into the cylinder
 B decreasing the density of the liquid
 C increasing the air pressure above the liquid
 D increasing the density of the liquid

- 14** Torque is the result of a pair of forces acting to cause a turning effect. Torque is calculated as the product of force and distance.

Which row gives the correct description of the force and the distance used to calculate the torque of a couple?

	force	distance
A	the magnitude of one force	the perpendicular distance between the two forces
B	the sum of the magnitudes of both forces	the perpendicular distance between the two forces
C	the magnitude of one force	the perpendicular distance from one force to the mid-point between the forces
D	the resultant of the two forces	the perpendicular distance from one force to the mid-point between the forces

- 15** The density of paper is 800 kg m^{-3} . A typical sheet of paper has a width of 210 mm and a length of 300 mm.

The thickness of a pack of 500 sheets of paper is 50 mm.

What is the mass of a single sheet of paper?

- A** 0.5 g **B** 5 g **C** 50 g **D** 500 g

- 16** Which statement about equilibrium is correct?

- A** If a system is in equilibrium then there must be no forces acting on it.
B If a system is in equilibrium then there must be no resultant torque on it.
C If there are no moments due to forces acting on a system then it must be in equilibrium.
D If there is no resultant force acting on a system then it must be in equilibrium.

- 17** An object of weight 3.0 N is moved vertically at a constant velocity v by an electric motor.

The electric motor has an efficiency of 25%.

The object travels a vertical distance of 1.2 m in 3.0 s.

Assume that the useful output energy of the motor is equal to the increase in gravitational potential energy of the object.

What is the electric power supplied to the motor?

- A** 0.3 W **B** 1.2 W **C** 4.8 W **D** 30 W

- 18 An alpha particle has $2.2 \times 10^{-13} \text{ J}$ of kinetic energy.

What is the speed of the alpha particle?

- A $4.1 \times 10^6 \text{ ms}^{-1}$
- B $5.8 \times 10^6 \text{ ms}^{-1}$
- C $8.1 \times 10^6 \text{ ms}^{-1}$
- D $1.2 \times 10^7 \text{ ms}^{-1}$

- 19 An initially unstretched spring is stretched within its limit of proportionality to a length of 80 mm.

The work done stretching the spring is 0.010 J.

The spring constant of the spring is 22.5 N m^{-1} .

What is the unstretched length of the spring?

- A 30 mm B 50 mm C 60 mm D 110 mm

- 20 What is meant by elastic deformation of a wire under tension?

- A deformation for which the elastic potential energy is proportional to the extension
- B deformation for which the extension is proportional to the tensile force
- C deformation for which the extension remains constant as the tensile force is removed
- D deformation for which the extension returns to zero when the tensile force is removed

- 21 The graph shows the variation of force with extension for a metal object deformed within its limit of proportionality.

What does the shaded area represent?

- A the elastic limit of the object
 - B the elastic potential energy stored in the object at an extension of P
 - C the spring constant of the object
 - D the Young modulus of the metal at an extension of P
- 22 What is the order of these principal regions of the electromagnetic spectrum from shortest to longest wavelength?
- A infrared radiation, visible light, ultraviolet radiation
 - B ultraviolet radiation, infrared radiation, visible light
 - C ultraviolet radiation, visible light, infrared radiation
 - D visible light, ultraviolet radiation, infrared radiation

- 23 The graph shows the displacement of each particle in a transverse wave against distance at one instant in time.

The speed of the wave is 1.6 m s^{-1} .

What is the frequency of the wave?

- A 0.050 Hz B 0.080 Hz C 5.0 Hz D 8.0 Hz

- 24 The siren on an emergency vehicle emits a sound of constant frequency 1100 Hz.

The driver in a stationary car hears the sound at a frequency of 1000 Hz.

The speed of sound in air is 340 m s^{-1} .

What is the velocity of the emergency vehicle?

- A 31 m s^{-1} away from the stationary car
 B 34 m s^{-1} away from the stationary car
 C 31 m s^{-1} towards the stationary car
 D 34 m s^{-1} towards the stationary car

- 25 A source of sound of constant power P is situated in an open space. The intensity I of sound at distance r from this source is given by the equation shown.

$$I = \frac{P}{4\pi r^2}$$

How does the amplitude a of the vibrating air molecules vary with the distance r from the source?

- A $a \propto \frac{1}{r}$ B $a \propto \frac{1}{r^2}$ C $a \propto r$ D $a \propto r^2$

- 26 Water waves diffract as they pass through a gap.

Which combination produces the greatest amount of diffraction?

	wavelength / m	gap width / m
A	10^{-1}	10^0
B	10^{-1}	10^{-2}
C	10^0	10^0
D	10^0	10^2

- 27 The diagram shows a beam of light of wavelength λ_x that is incident normally on a diffraction grating.

The diagram shows only the **second-order** intensity maxima that are produced at an angle of 45° to the direction of the incident beam of light.

A replacement beam of light of a different wavelength λ_y is now incident normally on the diffraction grating. This new wavelength also produces intensity maxima that are at an angle of 45° to the direction of the incident beam of light.

What is a possible value of the ratio $\frac{\lambda_x}{\lambda_y}$?

- A 0.25 B 0.75 C 1.25 D 1.50

- 28 A stationary sound wave is formed in a tube of length L that is closed at one end.

The diagram shows the positions of the nodes and antinodes of the stationary wave.

Which graph shows the variation of the amplitude a of the wave with distance x measured from the closed end of the tube?

- 29 Waves are emitted by two coherent sources. The two waves meet at point X where they have a constant phase difference of 180° .

At point X, the amplitude of one of the waves is 0.50 m and the amplitude of the other wave is 0.30 m. The waves superpose.

What is the amplitude of the resultant wave at point X?

- A** 0 m **B** 0.20 m **C** 0.40 m **D** 0.80 m

- 30 There is a current in a resistor for an unknown time.

Which two quantities can be used to calculate the energy dissipated by the resistor?

- A** the current in the resistor and the potential difference across the resistor
B the resistance of the resistor and the current in the resistor
C the total charge passing through the resistor and the potential difference across the resistor
D the total charge passing through the resistor and the resistance of the resistor

- 31 The diagram shows a metal block.

The block has sides of length a , b and c as shown, and its volume is V . Each charge carrier has a charge $-q$ and the number density of the charge carriers in the metal is n . It takes each charge carrier an average time of t to pass through the block.

What is an expression for the current I ?

- A $I = nqabc$ B $I = \frac{nqV}{t}$ C $I = \frac{nqbc}{t}$ D $I = nqaV$

- 32 An electrical component is connected into a circuit.

Which component and which change causes an increase in the resistance of the component?

	component	change
A	filament lamp	increase in electric current
B	light-dependent resistor (LDR)	increase in light intensity
C	semiconductor diode	increase in electric current
D	thermistor	increase in temperature

- 33 A metal wire with circular cross-section has length L and diameter d .

The resistance of the wire is R .

The wire is now melted and reformed into a new wire of diameter $0.50d$.

The volume of the wire is unchanged.

What is the resistance of the new wire?

- A R B $2R$ C $4R$ D $16R$

- 34 A battery with internal resistance is connected by wires to an external resistor.

Which statement describes the electromotive force (e.m.f.) of the battery?

- A It is the energy transferred per unit charge in driving charge through a connecting wire.
- B It is the energy transferred per unit charge in driving charge through the complete circuit.
- C It is the energy transferred per unit charge in driving charge through the external resistor.
- D It is the energy transferred per unit charge in driving charge through the internal resistance.

- 35 The diagram shows a circuit with a battery connected to a resistor with a resistance of $4.0\ \Omega$.

The battery has an internal resistance of $2.0\ \Omega$.

The voltmeter reads 12 V .

A second resistor of resistance $4.0\ \Omega$ is connected in parallel to the first resistor.

What is the new reading on the voltmeter?

- A 6.0 V
- B 9.0 V
- C 12 V
- D 24 V

- 36 Kirchhoff's first and second laws are a consequence of the conservation of different quantities.

What are those quantities?

	Kirchhoff's first law	Kirchhoff's second law
A	charge	energy
B	energy	current
C	current	charge
D	energy	charge

- 37 A battery of electromotive force (e.m.f.) 18.0 V and negligible internal resistance is connected to a network of three fixed resistors as shown.

The current in the battery is 0.108 A.

What is the resistance of resistor X?

- A 125 Ω B 167 Ω C 250 Ω D 500 Ω

- 38 A nucleus P undergoes β^+ decay, becoming nucleus Q and emitting two particles X and Y as shown.

Which two particles are X and Y?

- A electron and antineutrino
B electron and neutrino
C positron and antineutrino
D positron and neutrino

- 39 Which particle is a lepton?

- A neutrino
B proton
C strange antiquark
D up quark

- 40 A nucleus decays in a series of stages.

At each stage, an α -particle or β^- particle is emitted.

Which sequence of emitted particles forms a nucleus that is an isotope of the original nucleus?

- A $\alpha, \alpha, \beta^-, \beta^-$ B β^-, β^-, α C $\alpha, \alpha, \alpha, \alpha$ D $\beta^-, \beta^-, \beta^-$
